

In the Claims

Please cancel Claims 1-9.

Please amend Claims 10 and 28 as follows:

- Sub 1*
A1
10. (Amended) A laminate web having a plurality of apertures, said laminate web comprising:
- a) a first extensible web having a first elongation to break;
 - b) a second extensible web joined to said first extensible web at a plurality of bond sites, said second extensible web having a second elongation to break; and
 - c) a third web material being disposed between said first and second [nonwovens] extensible webs, said third web material having a third elongation to break which is less than both of said first or second elongations to break.
- A2*
28. (Amended) A disposable absorbent article comprising a laminate web having a plurality of apertures, said laminate web comprising:
- a) first and second extensible webs being joined at a plurality of discrete bond sites;
 - b) a third material disposed between said first and second nonwoven webs; and
 - c) said first and second [nonwoven] extensible webs being in fluid communication via the apertures and having distinct regions being differentiated by at least one property selected from the group consisting of basis weight, fiber orientation, thickness, and density.

REMARKS

The amendments to the Specification are made to reflect that the Clopay films used in the Examples were not formed films. The mistake was made inadvertently, and the correction is to simply make the Examples consistent with the actual data. The Clopay films used for central layers were thermoplastic films, which are disclosed as possible central layers at page 12, in line 22, for example. Therefore, no new matter or issues are believed presented.
